

# Unify & Enhance All Stages of Product Development

## Innovate & Profit

- Unlock product development agility and reduce time to market with Extensions to expand more advanced features

## Manufacture & Production

- Instant on, pre-configured multi-axis machine configurations
- Automated workflows for additive manufacturing
- Create optimized & associative multi-sheet nested layouts for metal & non-metal parts

## Collaboration

- Review designs, create, & participate in change orders, see BOM items, & change lifecycle states anytime, anywhere
- Connect teams, communicate in real-time, & manage projects with global collaboration

## Design & Engineering

- CAD, CAM, CAE, and PCB design software in a modern, intuitive UI leveraging cloud data storage
- Work seamlessly between Solidworks and Fusion 360
- Provide innovative design options in less time with Generative Design

## Quality & Supply Chain

- Validate product design performance & quality through mechanical, structural, & injection molding analysis tools
- Modify, compare, & simulate designs in a single application

## Data Management

- Share & manage data from a variety of file types with native CAD & business system plugins that keep teams working in the tools they know
- Start quickly & scale easily with configurable, out-of-the-box workflows & multi-CAD integrations

Find out how Fusion 360 can enhance and unify product development for your company.
